

Human-Computer Interaction

Educational Technology

Professor Bilge Mutlu

Today's Agenda

- >> Topic overview: *Educational Technology*
- >> Discussion
- >> Bonus lecture: *How to Conduct Online Studies*
- >> General Q&A

What is educational technology?[^1]

Definition: The *study* and ethical *practice* of facilitating learning and improving performance by creating, using, and managing appropriate technological processes and resources.²

²Richey, 2008, Reflections on the 2008 AECT Definitions of the Field
[^1]: Image source

*Some history: **Milestone 1: Teaching machines**³*

Mechanical devices, first developed in the 1920s by Sidney Pressey, presented educational materials and taught students. Early machines administered tests involving sequential multiple-choice questions.

³Petrina, 2004, Sidney Pressey and the Automation of Education, 1924-1934

Some history: **Milestone 2: Programmed learning**⁴

Teaching machines, developed by B. F. Skinner in the 1950s, directed at a broad range of students on a broad set of topics that provided positive reinforcement to facilitate learning.

⁴Image source

*Some history: **Milestone 3: Adaptive teaching machines**⁶*

Adaptive teaching machines, e.g., self-adaptive keyboard instructor (SAKI) developed by Gordon Pask in 1956, adjusted questions to the accuracy and response time of the student.

⁶Watters, 2015, [Gordon Pask's Adaptive Teaching Machines](#)

Some history: **Milestone 4: Computer-aided learning**⁷

Generalized computer-assisted instruction systems, e.g., the PLATO system developed at UIUC in the 1960s, offered comprehensive instruction on a range of topics.

CHANGING HOW THE WORLD LEARNS

*Some history: **Milestone 5: Educational programming**⁹*

Computer programming and robotics are used as learning instruments, e.g., to teach proceduralization, debugging, etc. Logo and Turtle were developed by Seymour Papert in 1967.

⁹[Image source](#)

Some history: **Milestone 6: Pervasive use of computer-aided learning**¹⁰

Pervasive, personal computers designed for education at schools and at home, such as the BBC Micro released in 1981.

The BBC Microcomputer Is Here!

A WONDER FOR THE MONEY. Even before its introduction in the U.S., the BBC microcomputer was acclaimed as a "no-nonsense computer" (BYTE magazine), "a remarkably friendly machine" that "will set the standard for home computers for quite some time" (POPULAR COMPUTING), and "the most versatile, small general-purpose computer I've seen . . . a wonder for the money" (COMPUTERS & ELECTRONICS).

EDUCATIONAL USES. The BBC micro was designed as part of a national computer literacy project, one portion of which is "The Computer Programme" TV series being shown in the U.S. on more than 220 PBS stations. BBC micros now account for more than 75% of the computers being ordered by British schools under a government plan to put a computer into every primary and secondary school.

THE SYSTEM. The BBC micro is based on a 2MHz 6502 main microprocessor with a combined RAM/ROM address capability of 64K.

HIGH RESOLUTION GRAPHICS. The system features very high resolution color graphics in modes up to 640 x 256 (163,840 pixels). Text display can be 80, 40 or 20 characters by 32 or 25 lines.

EXPANDABILITY. The computer includes built-in serial and parallel interfaces, a floppy disc interface, a 1MHz expansion bus, analog/digital interfaces, econet interface which allows schools and businesses to link economically up to

254 computers in a low cost local area network, and a unique high-speed data channel called the Tube[®] for adding a second processor.

SECOND PROCESSORS. An additional 6502 microprocessor provides increased processing speed and an extra 64K of RAM. Alternatively, a Z-80B Second Processor can be joined to add 64K of RAM and allow running of CPM programs[™], which are extensively used for business applications. A third choice is a UNIX based 16032 16-bit processor with 32-bit architecture that provides 256K RAM.

*Some history: **Milestone 7: Online learning***

Virtual learning environments (VLEs), such as the Strathclyde Personal Interactive Development and Educational Resource (SPIDER) began in 1998,¹¹ provide a complete environment that facilitates learning management.

Some history: **Milestone 8: Mobile learning**

Mobile learning, or m-learning, involves learning across multiple contexts, through social and content interactions, using personal electronic devices¹². Earliest concept was Alan Kay's Dynabook.¹³
